VPN connection to Technion with OSX

1. Click on **System Preferences** in the apple menu (top-left).
2. Click on the **Network** icon.
3. If the lock icon looks “locked”, click on it and type in your Administrator **Name** and **password**:

4. Click on the “**plus**” button at the bottom of the list panel to add a new service (Located just above the Lock). A small sub-window will open.
5. Select **VPN** in the Interface drop down menu.
6. Select **L2TP over IPSec** in the VPN type drop down menu and fill **Service Name** field as shown below:
7. Click Create; the small window will close.

8. Choose newly created connection and type in the following:
   a. Server Address: **132.68.236.252**
   b. Account Name: **<Your Account>@technion**

9. Click Authentication Settings... A drop-down options window will open:
10. As Shared Secret value use ‘technion’. Leave Password field empty because you will use one-time password from RSA token. Click OK.

11. Click Advanced. In the window check Send all traffic over VPN connection.

12. Click OK. Click Connect, enter your PIN+one-time password from RSA token:
13. And now you’re connected to Technion:
